

Children's Carriage and Stroller Testing

Special Offer

**One Testing Protocol
Worldwide Access**

A Children's Stroller is a vehicle designed to carry one or more children. It is a means of transportation for infants that requires someone to help push or pull them. Children's strollers are generally composed of **textiles** (e.g., cushions and awnings), **metals** (e.g., canopy supports and frames), **plastics** (e.g., small wheels, foot pedals, and handrails) and **anti-haze covers**. Strollers are used for infants and young children who have poor self-protection awareness and are often vulnerable to accidents. So the safety performance of strollers is very important. **STC Children's Carriage & Stroller Testing service has been Accredited by CNAS & CPSC.**

TESTING

Country / Region	Standard	Definition & Scope
Europe	EN 1888	<ul style="list-style-type: none"> Applicable to pushchairs and prams designed for the carriage of one or more children. EN 1888-1, up to 15kg each and up to 20kg for any integrated platform on which a child can stand. EN 1888-2, above 15kg up to 22kg each. Does not cover toys, baby carriers fitted with wheels, pushchairs and prams propelled by a motor, and pushchairs and prams designed for children with special needs.
USA	16 CFR 1227 ASTM F833	<ul style="list-style-type: none"> Applicable to carriage and strollers for infants or children. Stroller: designed for the transport of infants or children generally in an upright sitting or semi-reclined position. The motive power is supplied by a person moving at walking speed while pushing on a handle attached to the stroller. It is normally used for children from infancy to 36 months of age. Carriage: designed for the transport of an infant who is generally in a lying down position. The motive power is supplied by a person or persons pushing or pulling on a handle attached to the vehicle. Does not cover tricycles, bicycles, or other similar wheeled products that can be self-propelled, even if the item has a temporary or permanent handle.
China	GB 14748	<ul style="list-style-type: none"> Applicable to pushchairs and prams designed for the carriage of one or more children. Does not cover toys, pushchairs and prams designed for other special needs.
Australian	AS 2088	<ul style="list-style-type: none"> Applicable to convertible vehicles, wagon-type vehicles; and other vehicles that are able to be pushed by a carer in a stroller mode to transport one or more children. Not apply to learner tricycles, wheeled suitcases; and ride-on toys
